1

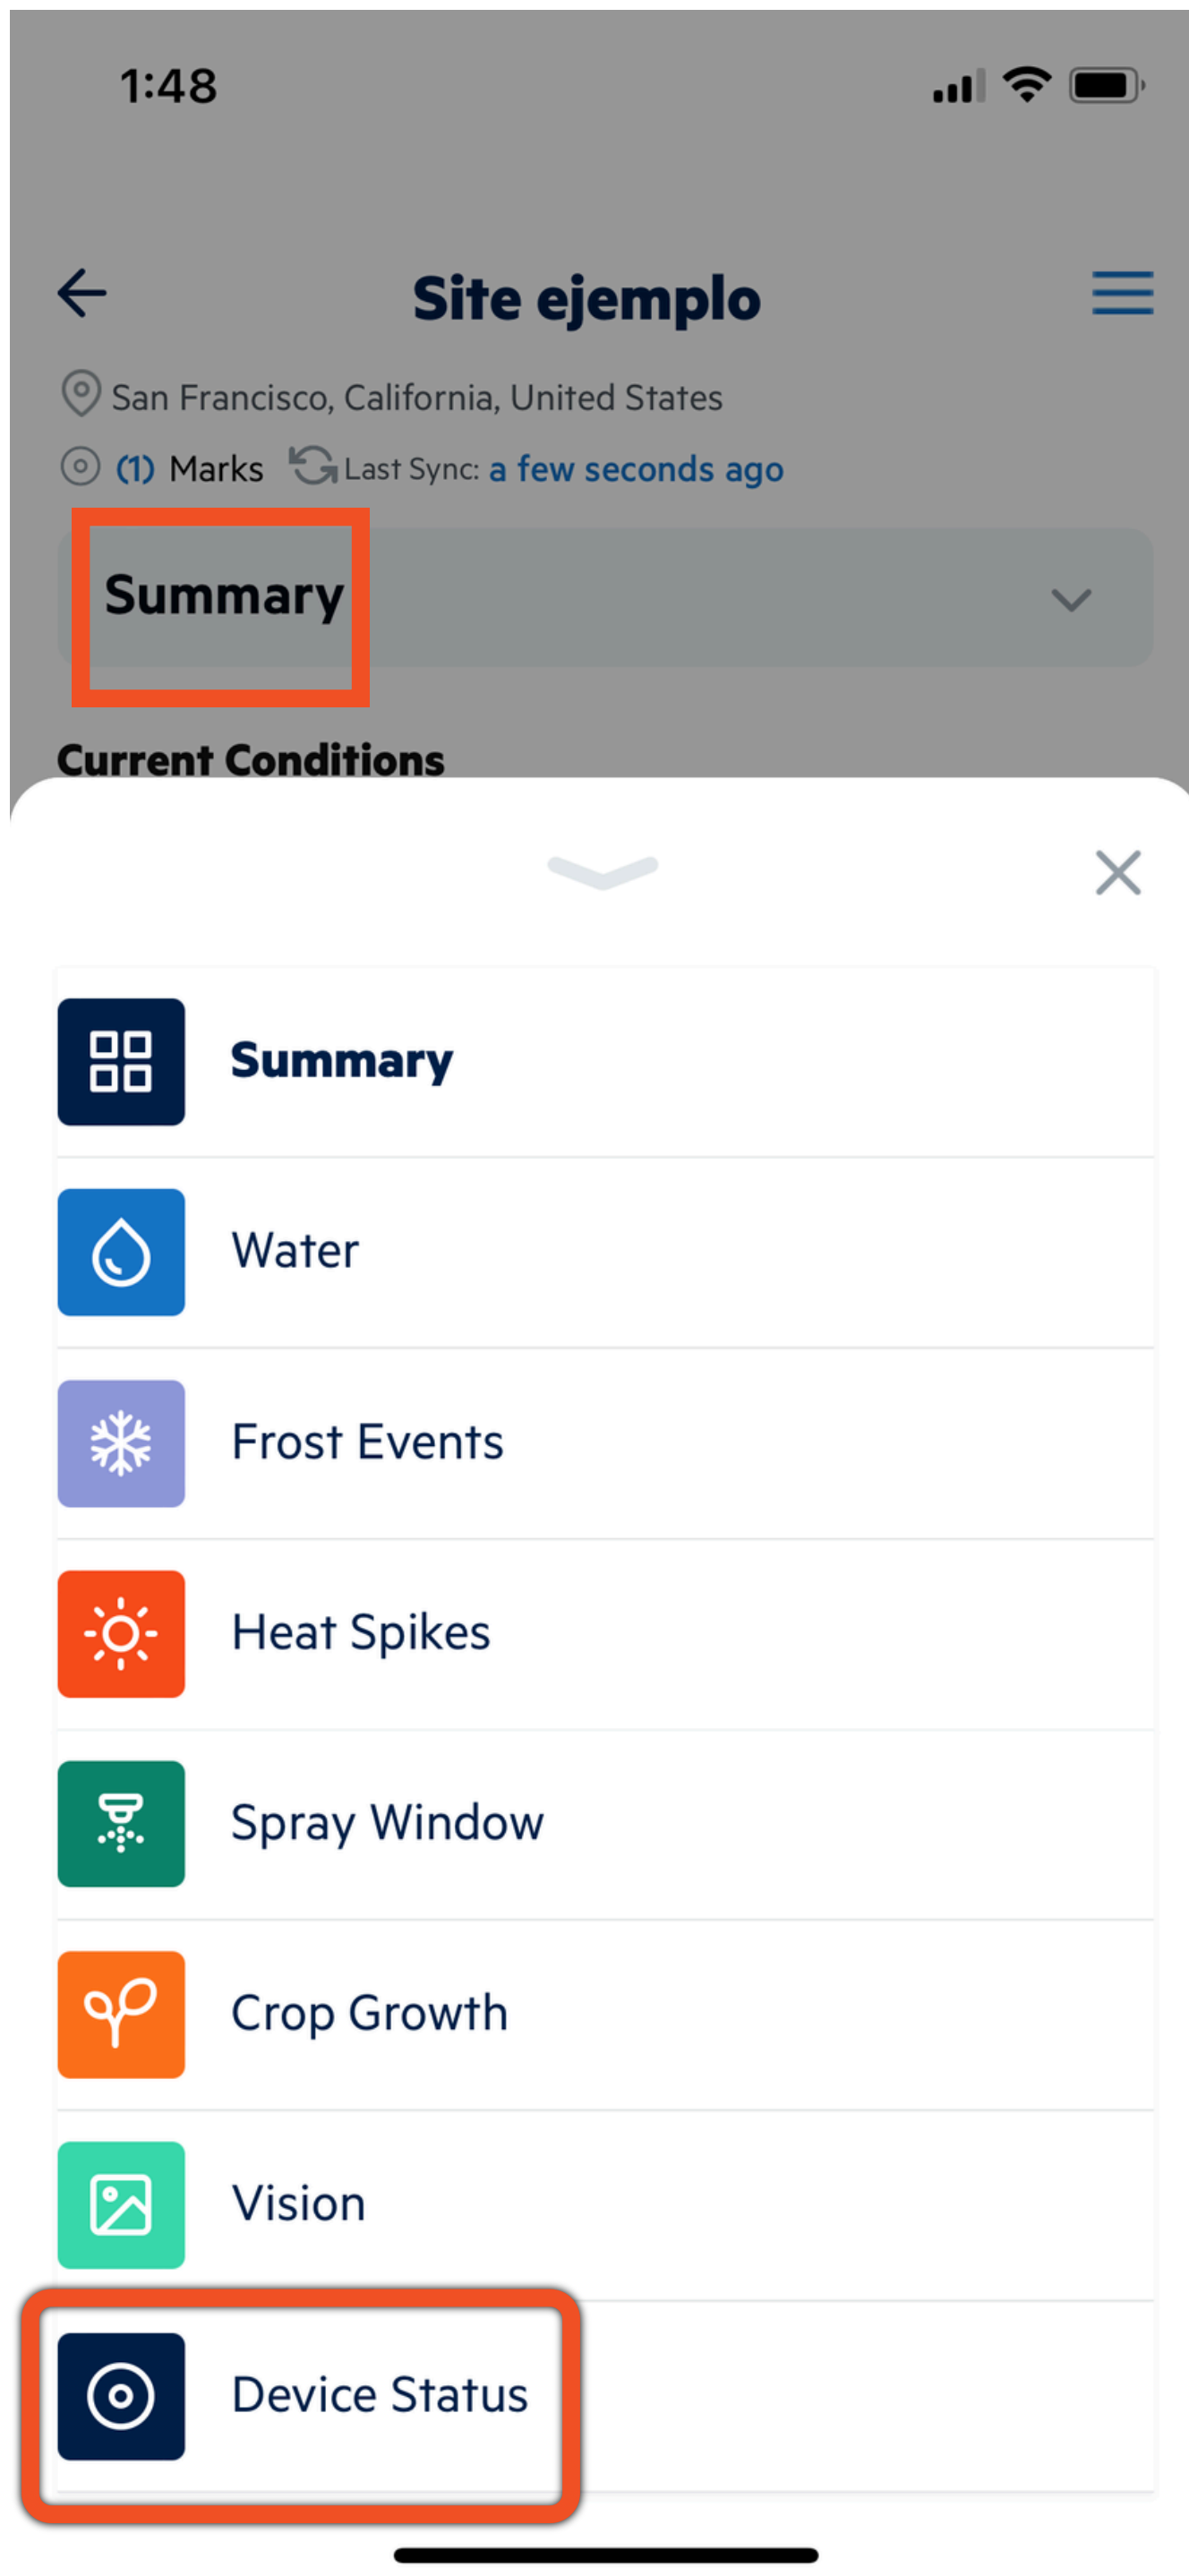

Go to the SETTINGS menu.
Select the ORGANIZATION and TEAM.

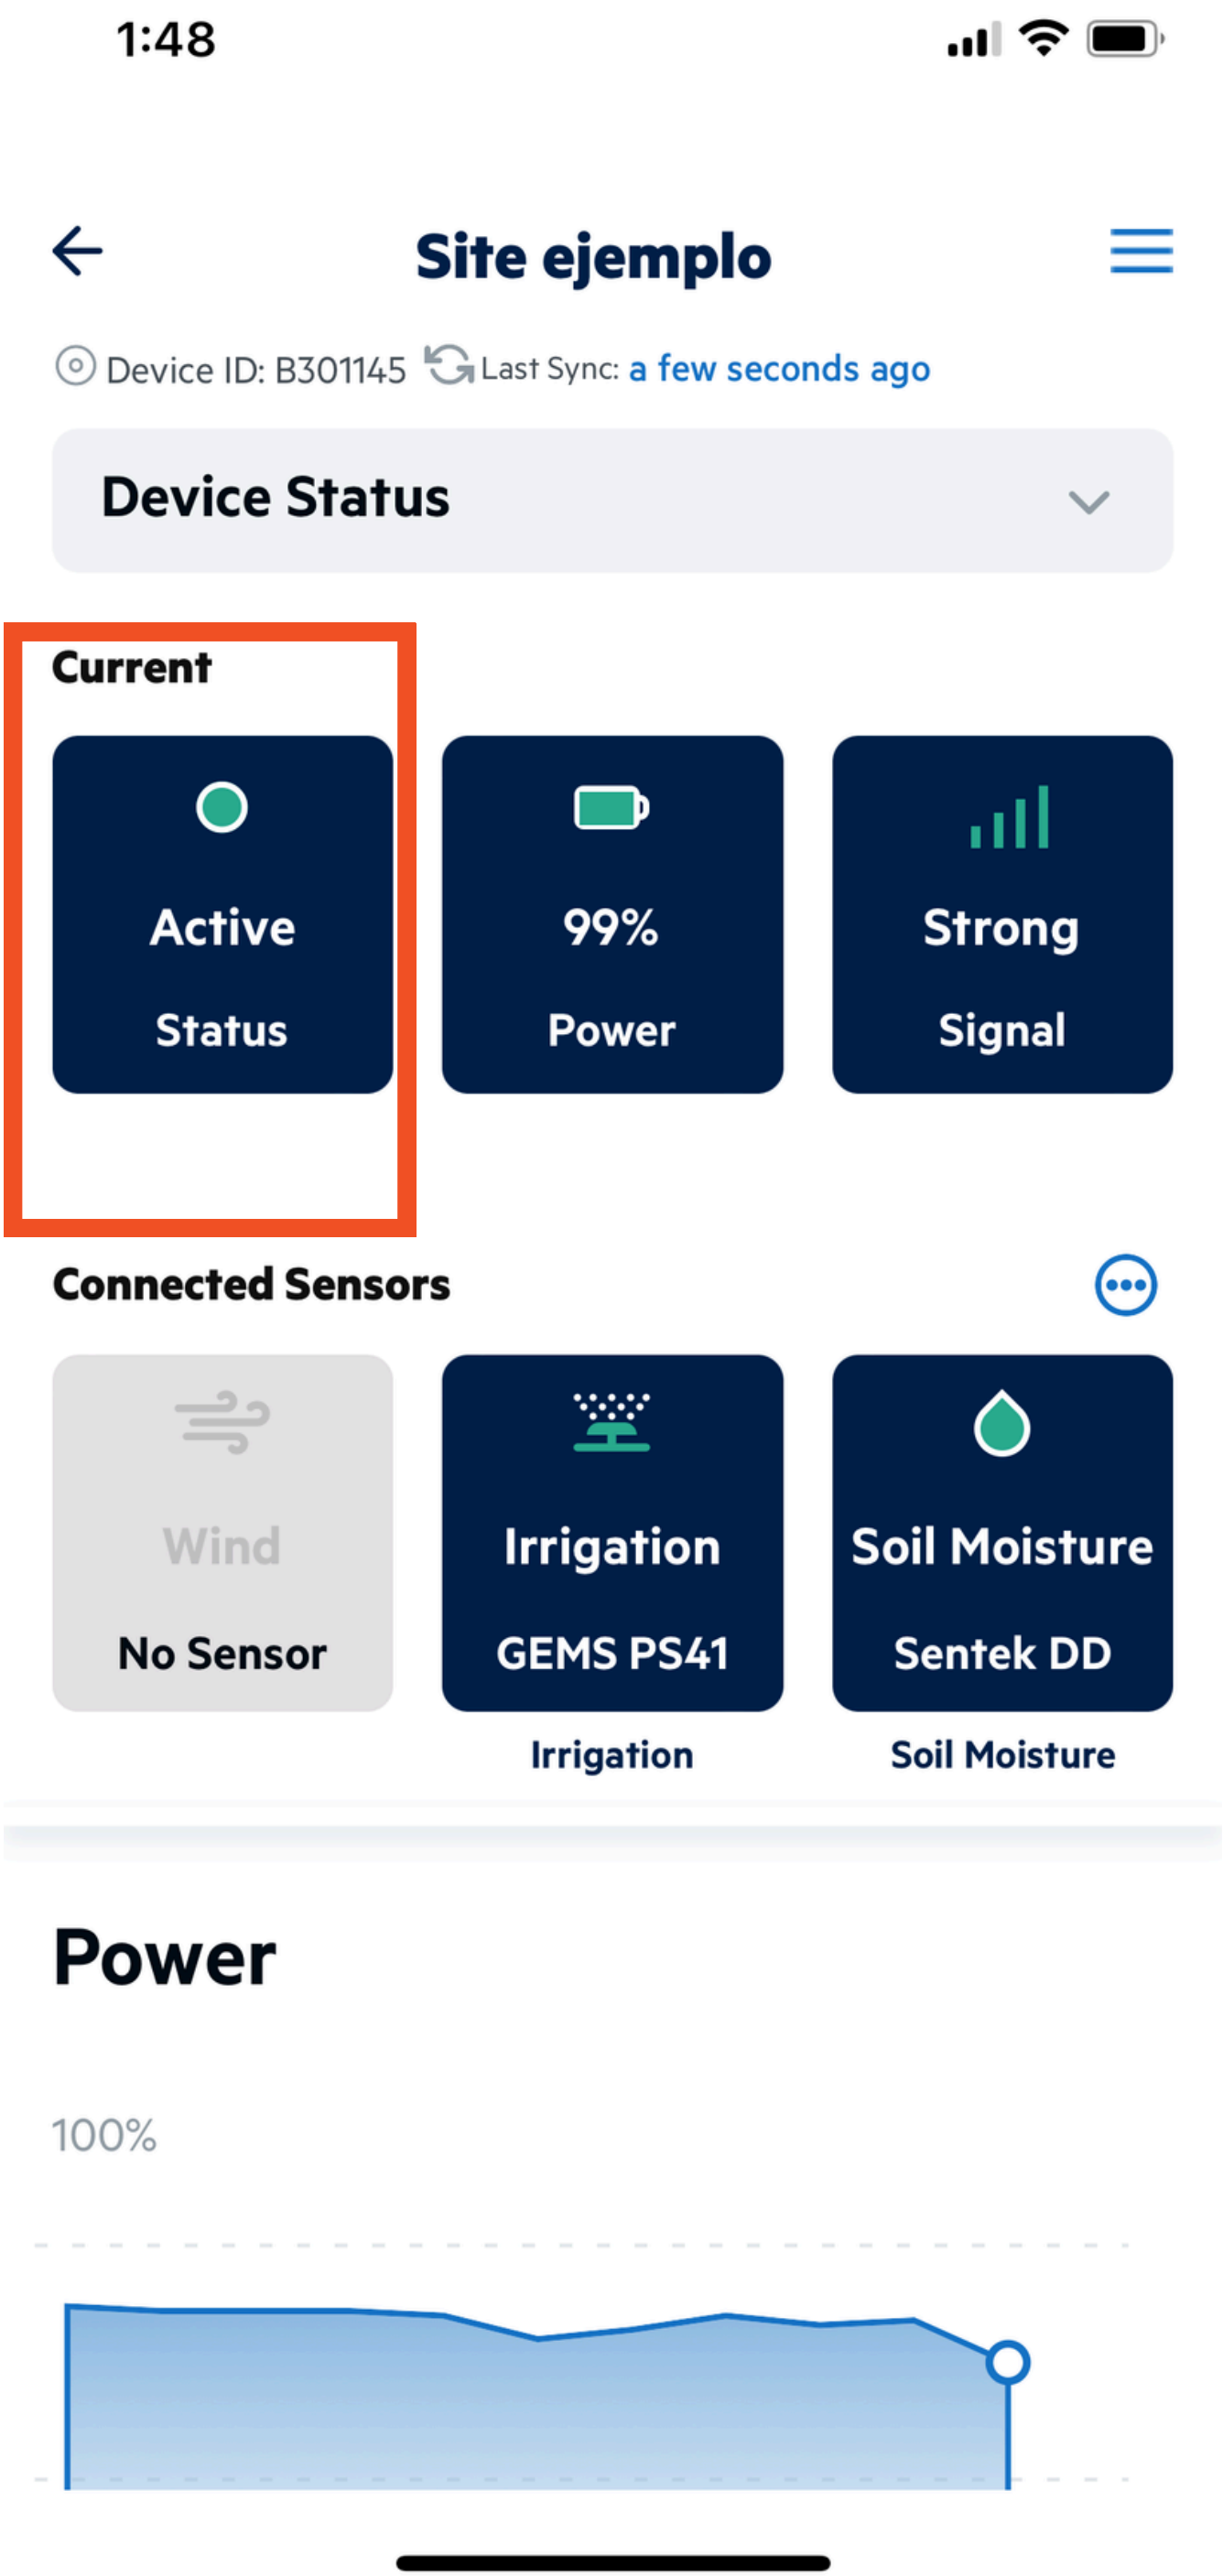

2 Go to the LIST menu.
Select the device to consult.

3 Go to the SUMMARY menu.
Select the DEVICE STATUS option.

4 Here you can see the general status of the MARK as well as connected sensors.

WHAT DOES EACH OF THE MARK DEVICE STATUSES MEAN?

Active

Named devices that are posting measurements to our servers as expected, at least once every 8.5 hours.

Dormant

Devices that have sent an undeployment message to the Arable system and are no longer collecting data.

Inactive

Deployed devices that experience a field problem. The main causes are battery percentage \leq 15% or the device has not posted measurements to our servers for 12 hours.

New

Factory-shipped devices that are added to your account will show up as untitled on first deployment. Once given a location name, the status is updated to active.

Removed

The removed device state is manually set by Arable after discussion with you and denotes that the device is stored for the winter.

Retired

The retired device state is manually set by Arable after discussion with you and denotes that the Arable Mark is physically damaged and non-functional.
